

MOBIX DEPOT

INTELLIGENT MANAGEMENT OF BUS DEPOTS

Intelligent management system adapted to the specific features of public transport

TO OPTIMISE parking spaces in the depots

ORGANISE incoming and outgoing vehicles as efficiently as possible

SYSTEM

HASTUS PLANNING TOOL

SMARTSPACE vehicle location solution

OPEN architecture

INTERFACE

- with other planning
- geo-tracking tools
- as well as networks of recharging points for electric vehicles.

THE CALCULATION MODULE includes a series of parameters that can be modified depending on the operator's needs.

THE SYSTEM CONFIGURATION TOOL can model the layout of the depots and vehicle requirements.

THE MODERN AND REACTIVE USER INTERFACE is based on new Internet technologies and is designed for different physical media (tablets, PC, etc.).

THE INTELLIGENT MANAGEMENT SOLUTION manages the bus depots centrally and offers certain vehicle planning and maintenance functions.

THE SYSTEM shows the buses the most suitable parking space in the depot. The vehicles are parked according to the incoming and outgoing logistical needs.
